

Comment on ET Docket 02-98

5.25 - 5.40 for amateur radio

I would like to suggest that a small portion, say 50 KC be used for CW, and the rest used for phone (SSB). With the band so small, and secondary use, I would suggest that it be opened for Extra and advanced class use only, This would limit the number of stations trying to use a small band. If isae turns out to be snall, then in the future it could be opened up for General class hams.

Thank you,

Allan Kruger W7ZK
